ABOUT

focused on building **complete, scalable systems**, not isolated features. Combines React, Laravel, and Node.js with AI-assisted workflows to accelerate development, structure maintainable architectures, and deliver production-ready interfaces. Demonstrates strong capability in translating requirements into structured systems, integrating APIs, and modernizing legacy codebases into component-driven architectures.

CORE COMPETENCIES

System Design and Modular Architecture
Full-Stack Development (React, Laravel, Node.js)
REST API Design and Integration
Frontend Engineering (React, Tailwind, Angular – Beginner)
AI-Augmented Development and Workflow Automation
Codebase Refactoring and Modernization
Responsive UI and Performance Optimization
Database Design (MySQL, MongoDB)
DevOps Fundamentals (Docker, Git)

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), PHP, Python
Frontend: jQuery, React, Next.js, Angular (Beginner), HTML5, CSS3, Tailwind CSS, Bootstrap
Backend: Laravel, Node.js, Express.js
Database: MySQL, MongoDB
DevOps & Tools: Docker, Git, GitHub, GitLab, XAMPP, Figma, Docker Desktop, Jira, VsCode
Office Tools/ Productivity Tools: Microsoft Word, Microsoft Excel, PowerPoint,Prezi,Gamma

---

AI / AUTOMATION / PRODUCTIVITY TOOLS

ChatGPT, Claude, OpenRouter, DeepSeek, GitHub Copilot, Gemini
AI API integration for code generation, workflow automation, and frontend scaffolding
Designed AI-assisted generation pipelines that transformed structured documentation into React and Tailwind UI components through prompt construction, model output validation, and automated file generation.

PROFESSIONAL EXPERIENCE

Frontend Developer Intern — Gemini-IT

Aug 2025 – Present

- Developed frontend components within Angular-based applications, contributing to structured UI layers and maintainable component hierarchies

- Integrated frontend interfaces with backend APIs, ensuring data consistency and proper request/response handling
- Improved application structure and UI performance through iterative debugging and refactoring
- Built internal tools leveraging AI APIs to generate React and Tailwind interfaces from documentation, reducing manual frontend effort and accelerating development workflows

---

SELECTED PROJECTS / PROJECT IMPACT

Feature Shoes — E-commerce System (Flagship Project)

url: https://markhifs.vercel.app

- Designed and implemented a complete e-commerce system from the ground up
- Structured core business logic including product catalog, cart management, and checkout flow
- Built frontend architecture using React and Tailwind with reusable, scalable components
- Delivered a responsive, performance-oriented UI with clear separation between presentation and logic

---

Order Tracking System

- Engineered backend logic to manage order lifecycle and state transitions
- Designed RESTful APIs using Node.js and Express for tracking and updating order states
- Built a monitoring interface to visualize order progress in real time
- Structured backend to support maintainability and extensibility

---

AI Frontend Generator

- Designed and implemented a system that generates React and Tailwind interfaces from structured documentation or prompts
- Integrated multiple AI tools and APIs to automate frontend creation workflows
- Built a pipeline transforming input (documentation) into structured UI output

Outcome:
Reduced development time, accelerated prototyping cycles, and improved development efficiency

---

OOP Learning Platform
url: https://poo-sandy.vercel.app

- Built an interactive platform for teaching object-oriented programming concepts
- Structured content using reusable UI components and clear navigation patterns
- Focused on clarity, usability, and structured learning experience

---

VOLUNTARY EXPERIENCE / CONTRIBUTIONS

Frontend Systems Development (Independent Contributions)

Les Jardins de Versailles

- Built frontend architecture from scratch using React and Tailwind
- Designed responsive layout and scalable component structure
- Improved user experience through modern UI practices and fluid design

GDP Project

- Refactored legacy HTML/CSS/JavaScript project into React-based architecture
- Structured reusable components for maintainability and scalability
- Improved performance and code organization

Public Decoration Platform

- Enhanced responsiveness and usability across devices
- Optimized UI structure and layout consistency
- Applied modern frontend practices to improve overall experience

---

EDUCATION

ISTA Hay Riad — Specialized Technician in Digital Development
2024 – 2026

Baccalauréat — Sciences Physiques
2023 – 2024

SELF-LEARNING / CONTINUOUS DEVELOPMENT

Advanced web development through real project implementation (React, Laravel, Node.js)
Hands-on experience with AI tools and API integration
Exploration of Docker and modern development workflows

LANGUAGES

Arabic — Native
French — Intermediate

English — Intermediate
German — Beginner

PORTFOLIO / GITHUB HIGHLIGHTS

Portfolio: https://ismailmarkhi1.vercel.app
GitHub: https://github.com/IsmailMarkhi

Projects demonstrate:

- Transition from static websites to component-based architectures
- Practical system-building approach
- Integration of AI into development workflows
